

According to Microsoft data, about 4.2 million people in Indiana do not use the Internet at minimum broadband speeds.

# INDIANA

POPULATION: 6.81 MILLION  
COUNTIES: 92

The FCC evaluated 6.7 million people in Indiana and found that nearly 6.5 million (96.1%) had access to a fixed broadband connection at minimum speeds of 25/3 Mbps. In rural Indiana, it found that 1.6 of 1.8 million people (87.4%) have fixed broadband access. Among urban residents, the FCC evaluated 4.9 million people and found that 4.8 million (99.4%) had access to a fixed broadband connection.

The State of Indiana offers an [interactive broadband map](#) that offers filters showing wired, wireless, and satellite connections. The map also allows users to filter for download and upload speeds in increments of 0.2, 0.7, 1.0, 1.5, 3.0, 6.0, 10, 25, 50, 100, and 1000 Mbps. Users can also filter based on provider and look up services offered based on proximity to an address. The map is created using the FCC's Form 477 data from June 2019.

BroadbandNow ranks Indiana [21st in broadband connectivity, with 79.8% terrestrial wireline coverage and 53.4% access to a low-price wired plan](#). According to BroadbandNow:

*There are currently 666,000 people in Indiana without access to a wired connection capable of 25 Mbps download speeds. Another 718,000 people in Indiana have access to only one wired provider, with no other options to switch. Lastly, 265,000 people in Indiana don't have any wired Internet providers available where they live at all.*
