77 South High Street  
Columbus, OH 43215-6117

Re: HB 110 Should Support Community Broadband Solutions, Which Are Critical to Connect All Ohio Residents

Dear Governor DeWine,

Residents and businesses in every corner of Ohio need high-quality, reliable, and affordable Internet access. Next Century Cities is a nonpartisan 501(c)(3) focused on supporting local officials and community leaders in their efforts to bring high-quality and affordable service within reach for every resident, including 11 of our member municipalities in Ohio. Statewide, local governments have established their own broadband solutions to fill critical service gaps and revitalize their community's economy.

Thousands of Ohio residents and businesses enjoy fast, reliable service through municipally owned and operated networks. For example, community-owned broadband providers in Fairlawn and Hudson were created to fill a bandwidth void, not served by local incumbent providers. These networks now offer transparent prices and have kept their businesses and residents connected to vital resources throughout the pandemic. Medina County operates an open-access network that promotes competition among providers, while the service that the City of Dublin provides to businesses is an essential tool for economic development.

Public providers offer services that invite business investment into their communities and improve their residents' quality of life. The Senate Amendments to House Bill 110 ("HB 110") would undermine those efforts.

Inhibiting current municipal providers from offering service would weaken consumer choice and reduce incentives for quality improvement. Limiting networks' ability to only support unserved areas will leave residents without high quality services needed for telework, distance learning, healthcare, and other indispensable services. Further, requiring that providers remain in their political subdivision will undermine collaborations between local governments, partnerships that frequently produce cost savings and expedite deployment timelines.

In effect, HB 110 could restrict communities' funding opportunities for network deployment. Instead of expanding broadband access in communities with the greatest need, the current proposal promises to hinder long-term broadband development plans, which often rely on a variety of funding sources. While federal funding is available for communities to improve local infrastructure, such as high-

speed broadband networks, HB 110 could also cut Ohio communities off from critical funding pools, sabotaging new and future opportunities to improve broadband infrastructure.

There are local and statewide benefits associated with Ohio communities being able to take full advantage of any and all resources aimed at improving digital infrastructure, but local governments need the authority to provide service wherever they build networks.

Rather than restricting the purposes for which communities can use their broadband infrastructure funds, legislative remedies should support a collaborative approach to expanding broadband access. That requires inviting local solutions that redefine connectivity for Ohioans who have persistently struggled to get online.

We look forward to partnering with your office and the House of Representatives, working together to ensure that all Ohioans can get online.

Sincerely,

Next Century Cities
